

# BATTERY STRATEGY

Keep your valuable solar energy and access emergency power by integrating battery storage into your solar system

## There's never been a better time to invest in solar battery storage!

Under NEM3, solar users will get 75% to 80% less from their utility for the extra solar energy they share with the grid making battery storage more attractive than ever. Here are three great reasons to add battery storage to your solar system:

### 1 Practice Peak Shaving

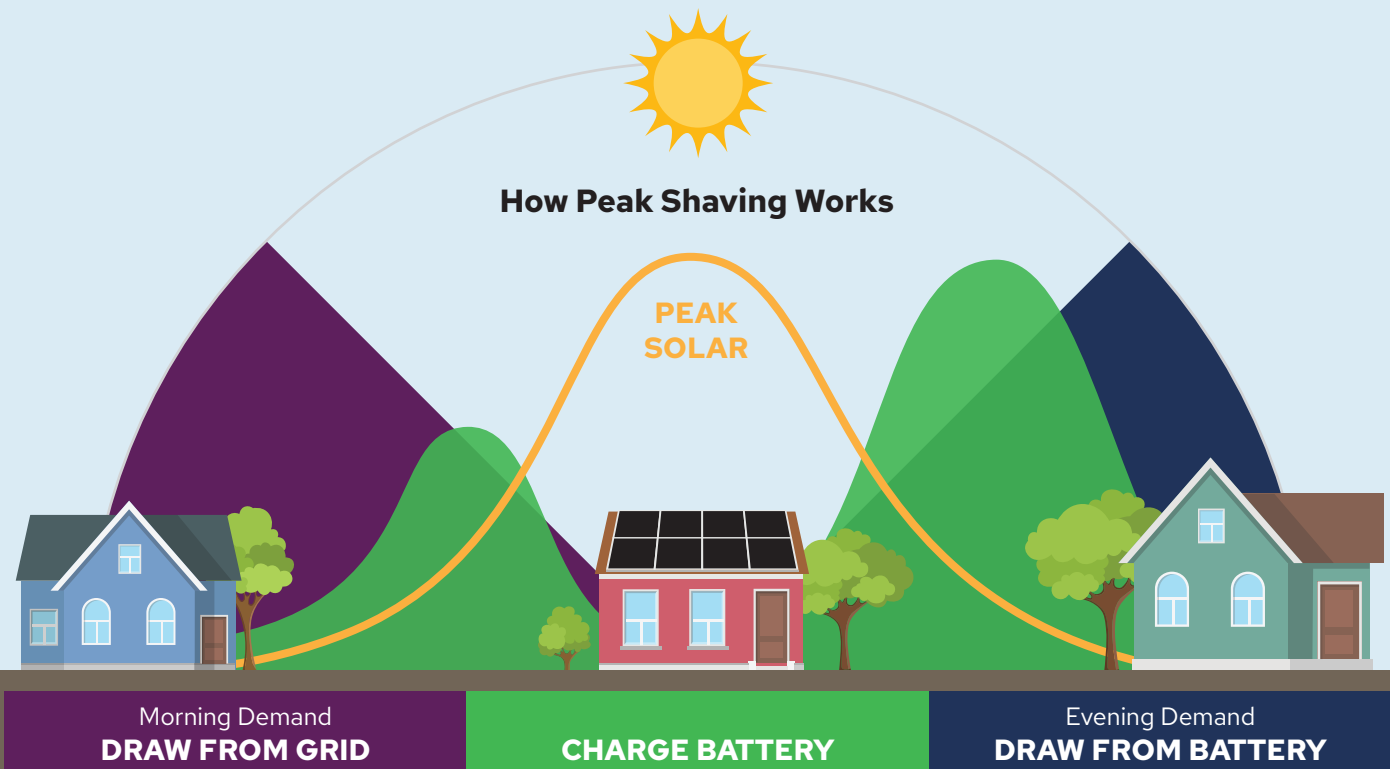

Your batteries charge at the lowest cost—during off-peak hours or with your free solar energy and discharge during peak pricing.

### 2 Qualify for a SGIP Rebate

The Self-Generation Incentive Program (SGIP) provides rebates for qualifying distributed energy systems such as battery storage.

### 3 Generate Emergency Power

As extreme weather events become more frequent, your battery storage will provide power when the grid is down.

Let's find the battery solution that's right for you!
